DETAILED ACTION

Drawings

1. The drawings are objected to under 37 CFR 1.83(a) because they fail to show reference numeral 10 in figure 1 as described in the specification. Any structural detail that is essential for a proper understanding of the disclosed invention should be shown in the drawing. MPEP § 608.02(d). A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Double Patenting

2. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321© may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground

Art Unit: 2681

provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

3. Claims 1, 2 and 4 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claim 1, 6 and 15 of U.S. Patent No. 6,138,004. Although the conflicting claims are not identical, they are not patentably distinct from each other.

Specifically, claim 1 of the present application and claim 1 of the above identified patent disclose an interlink receiver system for encoding wireless phone units with security codes comprising a host computer, an interlink receiver unit remote from the host computer, connecting means between the interlink receiver and a wireless phone unit for communicating, authentication means in the interlink receiver unit that authenticates the interlink receiver unit using stored authentication code of the interlink receiver and cooperative authentication means in the host computer for authenticating the interlink receiver and authorizing exchange of data between the host computer and interlink receiver.

Claim 2 of the present application and claim 6 of the above identified patent both claim the interlink receiver as described above and further including wherein the host computer has

Art Unit: 2681

data in the form of security codes and program means for transferring data when the interlink receiver unit is in communication with the host computer.

Claim 4 of the present application and claim 15 of the above identified application both claim an interlink receiver for entering/activating security codes in wireless phone units under control of a remote host computer, the interlink receiver unit comprising internal electronic circuitry, protected memory communications means for exchanging data between the interlink receiver unit and the host computer and data transfer means for transferring activation commands/security code data to the wireless phone unit in communication with the interlink receiver unit on command by the host computer.

4. Claims 3 and 5 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1 and 15 of U.S. Patent No. 6,138,004 in view of Lynch et al (Lynch), U.S. Patent No. 5,761,618.

Regarding claims 3 and 5, U.S. Patent No. 6,138,004 discloses the interlink receiver system/unit as described above. U.S. Patent No. 6,138,004, however, fails to disclose wherein the interlink receiver unit is in the form of a smart card.

In a similar field of endeavor, Lynch discloses remotely downloading new system data into the memory of a wireless device/handset. Lynch further discloses the use of a smart card which acts as an interlink receiver in order to download information to the wireless device/handset (col. 18, line 59-col. 19, line 4).

Art Unit: 2681

At the time of invention, it would have been obvious to a person of ordinary skill in the art to modify U.S. Patent No. 6,138,004 with the teachings of Lynch for the purpose of allowing manual downloading of information, which would, in certain instances, be desirable by the user when maintenance is needed (Lynch, col. 19, lines 1-4).

Conclusion

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Temica M. Davis whose telephone number is (703) 306-5837. The examiner can normally be reached on Monday-Thursday from 7:30 am to 5:00 pm. The examiner can also be reached on alternate Fridays.

If attempts to reach the examiner are unsuccessful, the examiner's supervisor, Dwayne Bost, can be reached on (703) 305-4778.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to TC2600 Customer Service whose telephone number is (703)306-0377.

Any response to this action should be mailed to:

Commissioner of Patents and Trademarks
Washington, D.C. 20231

or faxed to:

(703) 872-9314 (for any communications intended for entry).
